

Undheim

Construction ready site with great expansion opportunities. Powered by wind and hydropower.

- Designed capacity: 20 MW (100 MW in 24 months.)
- Campus footprint: 70.000 m²
- Independent feeds: 2
- Power source: Renewable wind and hydropower
- PUE/Cooling method: 1.20 / air/water
- Earliest Time to RFS (Ready for Service): Q1 2024

The Undheim site is located 40 km from Stavanger and connected to nearby wind farm. It is also only 11 km from the Kalberg site and has the same benefits in terms of power from the new substation as well as access to multiple fiber lines.

The site is smaller in size but an additional 225 000 m² of expansion is possible in close proximity.

The excess heat from the data centers can be sent to the regional district heating or be used to support industries like vertical greenhouses, land-based fish farms or bio-gas production in the area.

The site is well connected by air and road. Sola International airport is only 20 km away.
